1. Project Overview

This document describes the proposed B2B Lead Generation CRM. It is one central platform to bring in leads, follow them up, record customer requirements, source products from suppliers, prepare quotations and track the final result.

Valuable records are never deleted. Unsuitable or inactive leads are moved to **Scrap**, where all history is kept and the record can be reactivated later.

Objective: one single source of truth for customer, sales, supplier, quotation and activity information.

Lead Generation	Sales Follow-up	Supplier Sourcing (Main Feature)
Bring in leads from Raw Data Upload, Call Team, LinkedIn, Telegram and web forms. Verify the data, remove duplicates and check every lead.	Calls, meetings, requirements and follow-ups in one place, with a clear funnel from New to Won or Lost.	When a customer needs something you do not have, ask suppliers, save their prices, choose one, and keep it as the reference in your quotation.

2. Business Objectives

The CRM will help the organisation to:	
▪ Keep all customer information in one place	▪ Capture leads from many sources
▪ Reduce duplicate records	▪ Never miss an enquiry or follow-up
▪ Track each customer from first contact to final result	▪ Keep full call and activity history
▪ Record customer requirements in a clear way	▪ Manage supplier enquiries and prices
▪ Create quotations with a clear price trail	▪ Understand why business is lost
▪ Keep inactive and lost records for future use	▪ Give management dashboards and reports

3. Scope at a Glance

Module	What it covers	Module	What it covers
Customers	Central customer profile	Suppliers and Enquiry	Supplier details, prices, replies
Data Upload	Bulk upload and checks	Quotations	Prepare, send and track
Lead Sources	Upload, calls, LinkedIn, Telegram	Won / Lost / Scrap	Results and archived records
Calling	Call activity and outcomes	Products / Services	Central product list
Requirements	Customer needs	Dashboard and Reports	Management view
Meetings	Scheduling and history	Users and Roles	Permissions
Follow-ups	Tasks and reminders	Activity History	Complete timeline
Sales Funnel	New to Won / Lost	Attachments, Alerts	Documents and reminders

4. Overall Business Workflow

5. Lead Sources and Data Upload

The CRM accepts leads from many channels. Every record saves its source, so management can see which channel brings the most leads.

Lead sources		
▪ Raw Data Upload	▪ Call Team	▪ LinkedIn
▪ Telegram	▪ Website / Online Forms	▪ Direct Entry

5.1 Bulk Upload

Customer data can be uploaded in bulk from an Excel or CSV file.

Checked before a record is created		
▪ Customer / company name	▪ Contact person	▪ Phone number
▪ Email	▪ Location	▪ Product / service requirement
▪ Source	▪ Other required fields	

The system finds duplicate and possible duplicate records before creating a new one.

6. Customer Profile

Each customer has one central profile. A team member can open it and understand the full relationship with that customer.

Customer profile		
▪ Company name	▪ Contact person	▪ Designation
▪ Phone number	▪ Email	▪ Location
▪ Industry	▪ Source	▪ Requirement
▪ Assigned employee	▪ Current status	▪ Last interaction
▪ Next follow-up	▪ Meeting history	▪ Quotation history
▪ Notes and remarks	▪ Activity history	

7. Calling Management

The calling team records every call and its result. The full call history stays under the customer record.

Call information		
▪ Call date and time	▪ Call status	▪ Call outcome
▪ Customer response	▪ Requirement details	▪ Customer interest
▪ Follow-up date	▪ Remarks	▪ Next action
▪ Assigned employee		

Call outcomes		
▪ Connected	▪ Not Connected	▪ Busy
▪ Call Back Required	▪ Interested	▪ Not Interested
▪ Requirement Received	▪ Meeting Required	▪ Wrong Number
▪ Other		

Lead check: after the call, the team marks whether the record is a real lead. Real leads move ahead to a meeting. Other records go to **Scrap** and are not deleted.

8. Requirement Management

When a customer shares a need, the team saves it in a clear format. One customer can have more than one requirement.

Requirement information		
▪ Customer	▪ Product / service	▪ Requirement description
▪ Quantity	▪ Expected timeline	▪ Budget (if available)
▪ Priority	▪ Required delivery date	▪ Additional specifications
▪ Assigned employee	▪ Remarks	

9. Meeting Management

Users can schedule customer meetings. After the meeting, the discussion and next steps are saved on the customer record.

Meeting details		
▪ Customer	▪ Contact person	▪ Meeting date
▪ Meeting time	▪ Meeting type	▪ Assigned employee
▪ Meeting status	▪ Meeting agenda	▪ Meeting notes
▪ Requirements discussed	▪ Next action	▪ Next follow-up date

Meeting status				
▪ Scheduled	▪ Completed	▪ Rescheduled	▪ Cancelled	▪ No Show

10. Sales Funnel

A clear visual flow shows how far each customer has moved. Only authorised users can change the stage.

New	Contacted	Qualified	Meeting	Opportunity	Quotation	Won / Lost
-----	-----------	-----------	---------	-------------	-----------	------------

Management can see	
▪ How many customers are at each stage	▪ Which employees are handling them
▪ Which records need follow-up	▪ Which requirements are waiting for action
▪ Which quotations are pending	▪ Which business is closed (Won)
▪ Which business is unsuccessful (Lost)	

11. Follow-up and Task Management

The main purpose of the CRM is that no follow-up is missed. Every task shows in a **Today / Upcoming / Overdue** view, so employees can plan their day.

Follow-up tasks can be created for			
▪ Calls	▪ Meetings	▪ Quotations	▪ Customer responses
▪ Supplier responses	▪ Requirement clarification	▪ Internal actions	

Follow-up information			
▪ Customer	▪ Task	▪ Assigned employee	▪ Due date
▪ Priority	▪ Reminder	▪ Status	▪ Remarks

12. Supplier Management and Sourcing MAIN FEATURE

Main use case: when a customer needs something that is not available with you, the requirement goes to suppliers. The team takes the price from a supplier, saves it as a **reference**, and uses it in the customer quotation.

12.1 Supplier Information

Supplier details		
▪ Supplier name	▪ Contact person	▪ Phone
▪ Email	▪ Address	▪ Products / services
▪ Pricing information	▪ Supplier reference	▪ Previous transactions
▪ Remarks		

Supplier history is kept, so the team can see all earlier enquiries, replies and prices from each supplier.

12.2 Supplier Enquiry and Pricing

- Send one enquiry by email to **all suppliers**, or to selected suppliers.
- Save every reply and compare the prices.
- Choose the supplier and save it as the **reference** ("price taken from here").
- Keep the link between the customer requirement and the supplier reply.

Supplier reply details		
▪ Supplier	▪ Product / service	▪ Quantity
▪ Supplier price	▪ Currency	▪ Validity
▪ Delivery information	▪ Supplier quotation / reference number	▪ Additional terms
▪ Remarks	▪ Attachment (if any)	

12.3 Supplier Help in Quotation

Every customer quotation shows the supplier and the reference behind its price. The team always knows where each price came from.

13. Quotation Management

Users can prepare and manage customer quotations, linked to the requirement and the supplier price.

Quotation information		
▪ Customer	▪ Requirement	▪ Product / service
▪ Quantity	▪ Supplier	▪ Supplier price
▪ Customer selling price	▪ Margin	▪ Quotation number
▪ Quotation date	▪ Validity	▪ Terms and conditions
▪ Quotation status	▪ Attachments	▪ Remarks

Quotation workflow

Quotation status			
▪ Draft	▪ Under Review	▪ Sent	▪ Viewed
▪ Negotiation	▪ Accepted	▪ Rejected	▪ Expired

14. Won, Lost and Scrap Records

Every customer record ends with a clear result.

14.1 Won

When the customer accepts the quotation and business is confirmed, the record is marked **Won**.

Information kept		
▪ Customer	▪ Requirement	▪ Quotation
▪ Supplier	▪ Pricing	▪ Final value
▪ Employee	▪ Closure date	▪ Remarks

14.2 Lost

If the business does not go ahead, the record is marked **Lost**. A reason is **required**, and the user can add a comment.

Lost reasons		
▪ Price too high	▪ Supplier price too high	▪ Customer selected another supplier
▪ Customer stopped responding	▪ Late response	▪ Delay from our side
▪ Requirement cancelled	▪ Requirement postponed	▪ Requirement changed
▪ Customer not interested	▪ Incorrect requirement	▪ Other

Example

Status: Lost | Reason: Price too high

Comment: Customer received a lower quotation from another supplier.

This information is used later for management analysis.

14.3 Scrap Records

Records that are not suitable, do not match the requirement, are inactive, duplicate or incorrect, or are no longer worked on are moved to a separate **Scrap Records** section.

Scrap means archived. It does NOT mean permanently deleted.

Information kept in Scrap		
▪ Customer information	▪ Source	▪ Previous activities
▪ Call history	▪ Requirements	▪ Meeting history
▪ Previous status	▪ Reason for moving to Scrap	▪ Assigned employee
▪ Date moved to Scrap	▪ Remarks	

Authorised users can search and review Scrap records. A Scrap record can be **reactivated** if the customer becomes relevant again.

15. Dashboard and Reports

Management gets one central dashboard that shows the overall business situation.

Area	What is shown
Leads and customers	Total customers, new customers, active customers, customers needing follow-up, Scrap records, source-wise customer count
Sales	Customers contacted, qualified customers, meetings scheduled, active opportunities, quotations generated, pending quotations, Won business, Lost business
Suppliers	Active suppliers, supplier enquiries, pending supplier replies, supplier prices received, supplier-wise activity
Lost business analysis	Total lost business, lost business by reason, price-related losses, supplier pricing issues, customer response issues, internal delays, other major reasons
Team performance	Assigned customers, calls completed, meetings completed, follow-ups completed, pending tasks, opportunities and quotations handled, Won / Lost business

Team performance reports are shown according to management permissions.

16. Search and Filter

Users can quickly find any customer or business record.

Search and filter by		
▪ Customer name	▪ Company	▪ Phone
▪ Email	▪ Product / service	▪ Source
▪ Assigned employee	▪ Date	▪ Current status
▪ Meeting status	▪ Quotation status	▪ Supplier
▪ Won / Lost status	▪ Lost reason	

17. Activity History and Audit Trail

The CRM keeps a timeline of important actions on each customer record, so the full customer journey is visible.
Example:

Date	Action	Date	Action
01-Oct	Customer Created	07-Oct	Supplier Enquiry Created
01-Oct	Calling Attempted	08-Oct	Supplier Price Received
02-Oct	Customer Contacted	09-Oct	Quotation Sent
02-Oct	Requirement Added	12-Oct	Customer Follow-up
03-Oct	Meeting Scheduled	15-Oct	Status Updated
05-Oct	Meeting Completed	06-Oct	Opportunity Created

Each action also records: who did it, the date and time, the previous value and the updated value.

18. User Roles and Access Control

Access is based on roles. Users can see and do only what their role allows.

Role	Access and responsibilities
Admin	User management, system configuration, master data management, full access
Manager	Team visibility, customer records, opportunities, quotations, suppliers, reports, performance monitoring
Sales / Calling Team	Assigned customers, calls, follow-ups, meetings, requirements, opportunities, quotations as permitted
Other Users	More roles can be created based on the organisation's needs

19. Notifications and Reminders

The CRM shows reminders inside the system for important activities.

Reminders		
▪ Follow-up due	▪ Overdue follow-up	▪ Upcoming meeting
▪ Meeting reminder	▪ Pending quotation	▪ Customer response pending
▪ Supplier response pending	▪ Opportunity needing action	▪ Quotation nearing expiry

20. Documents and Attachments

Files can be attached to customer, requirement, supplier and quotation records, so business information stays in one place.

Documents		
▪ Customer documents	▪ Supplier quotations	▪ Customer quotations
▪ Product documents	▪ Meeting documents	▪ Requirement documents
▪ Other supporting files		

21. Product and Service Management

One central list of the products and services you handle. Requirements, supplier enquiries and quotations are linked to it, so management can also analyse business by product or service.

Product / service information		
▪ Name	▪ Category	▪ Description
▪ Unit	▪ Supplier availability	▪ Pricing information
▪ Active / inactive status	▪ Additional details	

22. Data Import and Export

Import and export are controlled by user permissions and organisation policy.

Import	Export (for users with permission)
Customer data Existing business data Supplier data Product / service data	Reporting Analysis Management review Backup Business operations

23. Expected Outcome

Once in use, the CRM gives the organisation one clear and structured system for customers, suppliers and sales. It improves visibility, reduces missed follow-ups, keeps data organised and gives management useful information.

Our key principle

Every customer interaction can be tracked. Every requirement has a clear next action. Every quotation can be traced to its source. No valuable customer history is ever lost.
